

Masonry

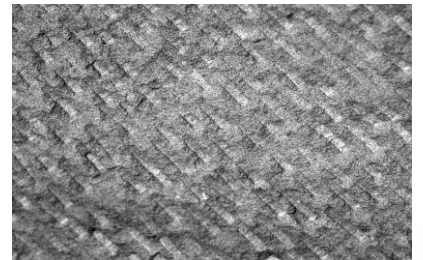

Cills, Lintels, Cornice & Chimney Copes

Hutton Stone Co Ltd provide a full Banker Masonry (Dressing of Masonry) Service. Using the traditional skills of hand dressing combined with modern profiling and lathe machinery we can produce any masonry element required including Cills, Lintels, Quoins, Jambs, Mullions, Copes, Chimney Caps, Plinth Course, Steps, Cornice and Tracery. In particular we specialise in matching traditional finishes, paying close attention to direction of tooling, chisel size and all the elements that are so important when sympathetically making an addition to an existing building. Shown below are 5 of the most commonly seen dressing styles in Scotland and the North of England.

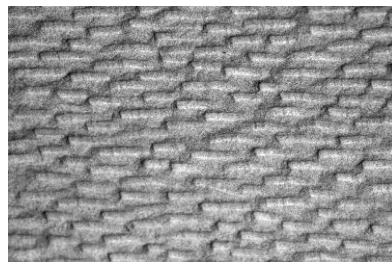

There are of course many subtle variations on these styles, and we are happy to adapt any style to suit your requirement. Full CAD drawings can be provided of any element within your project for your approval prior to ordering, and we are also able to provide site surveying of your existing stonework at a charge if you require it.

Broaching

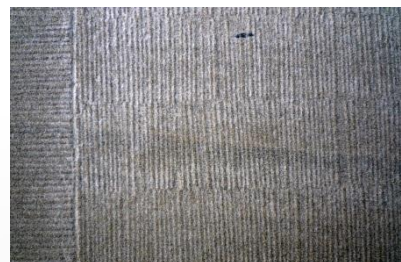

Diagonal Stugging

Horizontal Stugging
